## Verbal Description:

Triangular Flange Headless Plain

This example includes a Triangular Flange headless with a small flange - its rounded end does not protrude past the outer margin of the punctated sphere surface. Inside it is apparent that there was some sort of summiting element above the triangular flange, its form is not clear. The back is convex - angling almost straight back from the front perpendicular surface. External surface is very gritty - lots of protruding bits of clay.
